

Bone Densitometry (DXA) and Osteoporosis Program

A comprehensive bone density study is the key to evaluating your risk of osteoporosis. One out of every two women and one in four men over the age of 50 will have an osteoporosis-related fracture in their lifetime. We operate a Bone Densitometer (DXA) to provide your physician with precise and accurate information regarding your bone mass. Our orthopaedic team will assess your risk and help manage and treat any deficiencies. Please take a moment to fill out a risk assessment card and present the information to our medical staff. Your physician will determine whether or not you are at risk and should have a DXA scan.

Magnetic Resonance Imaging (MRI)

Our Clinic operates two MRI units to meet the specific needs of our patients. The ONI Extremity MRI system, which is the world's first and only high field extremity magnet, specializes in exams of the foot, ankle, knee, hand, wrist, and elbow. This state of the art technology allows you to sit comfortably in a chair while placing only your extremity into the scanning device. Our second high field MRI performs a wide variety of exams, including evaluation of the neck, spine, shoulder, and hip. We can often schedule and perform MRI studies the same day as your doctor's appointment. The results for the procedure will be reviewed by your physician and a Radiologist. Typically, radiology reports are available to your doctor within 24-48 hours and can be available in as little as 2 hours for emergencies. All MRI images are captured digitally for the highest level of resolution.

Your care, comfort, and satisfaction are our top priorities. At Baton Rouge Orthopaedic Clinic, our goal is to provide a seamless continuum of health care services to maximize your outcomes and convenience. We offer an organized and coordinated continuum to provide better and timelier feedback between the patient, physician, and ancillary services provider. Our services are as follows:

- ✓ High Field Magnetic Resonance Imaging (MRI)
- ✓ Direct Digital Radiography (X-Ray)
- ✓ Multi-Slice Computed Tomography (CT)
- ✓ Bone Densitometry (DXA)
- ✓ Certified Hand Therapy
- ✓ Occupational Therapy
- ✓ Physical Therapy
- ✓ ASTYM Certified
