

# MyMobility Plan

## What can you do to stay independent?

Many of us make plans for retirement, but not everyone plans for other changes that come with age. This includes changes in our mobility—our ability to get around. It can be hard to talk about, but physical changes can affect our mobility as we get older. These changes can make it harder to get around and do things we want or need to do—like driving, shopping, or doing household chores.

**You might not have mobility problems now, but you could in the future.** You may know others who already do—perhaps a parent, relative, friend, or neighbor. You—or your loved ones—can take steps today that will help you stay safe and independent tomorrow.

The MyMobility Plan is a tool to help you plan for those changes and take action now. This planning guide includes checklists, tips, and resources to help you stay safe and mobile in the years to come. You can work through the plan by yourself or with your healthcare provider, family member, or friend.

**There may come a time when you can no longer drive but still need to get around.**

**Plan today.  
Stay independent tomorrow.**

**MySelf**  
Plan to stay healthy

**MyHome**  
Plan to stay safe at home

**MyCommunity**  
Plan to get where you want to go

**You can maintain your mobility by staying healthy and managing chronic conditions.** As you get older, you may have more visits with doctors or other healthcare providers to keep track of changes in your health. You also may need to focus on exercises that keep you strong and increase your balance. Complete the checklist here to get started.

**Get a checkup or wellness visit each year.**

Some treatable health issues (such as arthritis or balance problems) may increase your risk of being in a car crash or falling. You can check your fall risk at home using [bit.ly/falls-free-checkup](https://bit.ly/falls-free-checkup) and share results with your healthcare provider.

Last Exam Date: \_\_\_\_\_

Next Exam Date: \_\_\_\_\_

**Take care of your mental health.**

Stay connected with family and friends, do things you enjoy, and talk to a healthcare provider or counselor. Social isolation and conditions such as depression may increase your risk of falling. Who are some caring people you can talk or visit with?

\_\_\_\_\_  
\_\_\_\_\_

**Get a medical eye exam each year.**

Untreated eye problems can increase your risk of falling or being in a car crash.

Last Eye Exam Date: \_\_\_\_\_

Next Eye Exam Date: \_\_\_\_\_

### **MyMobility Tip**

The lenses used for reading in bifocal glasses change how you judge step heights and can lead to falls. Consider using a second pair of single lens glasses to prevent falls when outside of the home.

### **Get a hearing exam.**

Untreated hearing loss may affect your safety while driving or cause balance issues that can lead to a fall.

Last Hearing Exam Date: \_\_\_\_\_

Next Hearing Exam Date: \_\_\_\_\_

### **Be physically active with a focus on increasing your strength and balance.**

Doing strength and balance activities at least 3 times a week can reduce your risk of falling. These activities can be done on your own or with other people. You can do them at home, at a gym, or at a local community center like the YMCA. Activities like walking and stretching are good for you but do not reduce your risk of falling. Find examples of strength and balance activities and tracking tools at: [bit.ly/improve-physical-ability](https://bit.ly/improve-physical-ability) and [bit.ly/health-tracking-tools](https://bit.ly/health-tracking-tools).

### **Review all your medications regularly with your healthcare provider, such as a doctor or pharmacist.**

Certain medications can affect your ability to drive, walk, or get around safely. This includes some over-the-counter medications. Learn more at: [bit.ly/CDC-MedicinesRisk](https://bit.ly/CDC-MedicinesRisk).

### *My*Mobility Tip

Review your health insurance plan to understand benefits. Medicare plans may cover the cost of exercise programs like *SilverSneakers*® or *Silver&Fit*®.

### What can I do next?

Talk to your healthcare provider about your risk of falling or any concerns about driving.

### Injuries from falling can reduce your ability to stay mobile and independent.

You can help prevent falls in your home by making small changes and removing things that may cause you to trip. Schedule a time to go through the following home safety checklist to find changes that you can make to your home. Decide if you need help with a project and what tools you would need. If you need help, see if there are organizations in the community that provide materials, funds, or help with installations.

### Check the floors, stairs, and lighting in each room, including any basements, garages, porches, or entryways.

- Keep objects, such as purses and laundry baskets, off the floor.
- Remove or tape down rugs.
- Coil or tape cords and wires next to the wall and out of the way.
- Check for loose or uneven stairs. Repair if needed.
- Make sure carpet is firmly attached to every stair or remove carpet and attach non-slip rubber treads.
- Check for loose or broken handrails. Repair if needed.
- Install handrails on both sides of stairs if needed.

### MyMobility Tip

Falls are more likely when you are wearing socks indoors or footwear that does not cover the heel, such as flip flops. Wear safe shoes that fit well, with a firm heel to provide stability, and a textured sole to prevent slipping—even when inside your home.

- Use overhead lighting at the top and bottom of stairs and consider adding light switches at both the top and bottom of stairs.
- Add bright lightbulbs to fixtures. More information on choosing how to light specific rooms is available here: [bit.ly/light-health](https://bit.ly/light-health).

**Check the kitchen:**

- Put often-used items within easy reach.
- Use a step stool with a non-slip surface and a bar to hold on to when retrieving hard-to-reach items. Never use a chair as a step stool.

**Check the bedrooms:**

- Place lamps near the bed so they are within reach when you are in bed.
- Put in night-lights to see where you are walking in the dark. Consider battery-operated lights for areas that do not have electrical outlets. Also consider motion sensor night-lights.

**Check the bathrooms:**

- Put non-slip rubber mats or self-stick strips on the floor of the tub or shower.
- Install grab bars for support getting in or out of the tub or shower and up from the toilet.

**MyMobility Tips for Outside the Home**

Falls from outdoor ladders can be especially dangerous. Think about asking someone to help or hiring someone for chores like cleaning gutters and putting up holiday lights.

Snow and ice can increase outdoor falls. Make a plan to have snow removed from your sidewalks and entryways after snowfall. A thin layer of sand or cat litter can help prevent slipping on ice.

**What can I do next?**

Find more home modification information and resources at [go.usa.gov/xUEs3](https://go.usa.gov/xUEs3) and [bit.ly/home-fit-guide](https://bit.ly/home-fit-guide).

### Your transportation needs may change as you age.

You might get to a point when you are not comfortable driving in certain situations, like at night. Eventually you might not be able to safely drive. Physical changes such as joint problems may make it hard to walk places or use a bus.

We all need transportation for practical reasons like grocery shopping and medical appointments, but we also need it to spend time with friends and loved ones. Staying social helps us maintain our quality of life. The following steps can help you maintain independence and connections as you age.

### Do you drive?

- Learn tips to drive safely while aging:
  - NHTSA [bit.ly/driving-safely-aging](https://www.nhtsa.gov/road-safety/older-drivers)
  - AAA [bit.ly/senior-driving-safety](https://www.aaa.com/older-drivers)
- Consider a driver refresher course. Some insurers give a discount on your car insurance for taking a course:
  - AARP 1-888-687-2277 or [www.aarp.org](https://www.aarp.org)
  - AAA 1-800-222-4357 or [www.aaa.com](https://www.aaa.com)

### MyMobility Tip

Staying focused while driving is important for everyone. Avoid distractions in your car, such as listening to a loud radio, talking or texting on your phone, and eating. Set up navigation and adjust your mirrors and radio before you start driving, not while you are on the road.

□ **Find transportation options in your community.**

Finding transportation options before you need them—and learning how to use them—will help you keep the freedom to go where you want at any age. Here are some places to look for transportation options in your area. Not all of these may be available where you live:

- Rides in Sight 1-855-607-4337 or [www.ridesinsight.org](http://www.ridesinsight.org)
- Eldercare Locator 1-800-677-1116 or [www.eldercare.acl.gov](http://www.eldercare.acl.gov)
- A place of worship, local senior center, or similar organization
- Health insurance provider, like some Medicare and Medicaid plans
- Local government webpages for public transportation
- Taxis or rideshare services such as Uber and Lyft

□ **Make a plan for your future transportation options.**

Make a list of all the places you go now and how you get there. Then think about how you would get to these same places if you couldn't use your current way. Consider some of the options you found above. For example, maybe you currently drive yourself to get lunch with friends, but in the future you could get a ride from a friend or take a taxi if you couldn't drive yourself.

**MyMobility Tip**

Think about how a computer or phone can be used to:

- Have prescriptions or groceries delivered
- Check in with your doctor or other healthcare provider
- Connect with friends and family

**What can I do next?**

Get comfortable with the transportation options you find by trying them out now, perhaps with a friend or a family member.
